

Etch A Sketch

Our automated Etch A Sketch allows you to translate drawings from the web interface to drawings on the device.

Details

- You can elect to draw on a canvas or use DALL-E generated images as the basis for the sketch.
- The Etch A Sketch will then reset and prompt you to erase any earlier drawings on the device.
- Progress bar/LED indicators allow you to see how the drawing is shaping up in real time.
- You can stop the Etch A Sketch at any time by pressing the button on the breadboard.
- If you see it to completion, the drawing will **sorta** be on the Etch A Sketch.
